

Assignment 2

CS402 – Parallel And Distributed Systems

Question 1:**[15 Marks]**

Pick any public REST API (e.g., OpenWeatherMap, GitHub API, NASA API, Weixin API, etc.). Explore its documentation and prepare a 1-2-page report that includes:

- What the API does
- Base URL and key endpoints
- Required parameters and headers
- Sample request/response in JSON
- Explanation of the data structure
- Limitations or rate limits

Question 2:**[15 Marks]**

Write an explanation (1–2 pages) that describes how a RESTful system works, using a real-world analogy (e.g., ordering food at a restaurant, or checking into a hotel). Your explanation should include:

- What a client is
- What a server is
- What a request and response are
- What status codes mean
- What JSON is and why it's used
